

1, Explain uses of ping command in network ?

- * ping is a command used to check the network connectivity of a device.

2, Explain netbios protocol ?

Netbios is a protocol used to find the target IP with the help of target system name.

Note: It works only on same LAN network.

3, Explain SMB protocol ?

4, Explain ping process from 50.0.0.10 to 50.0.0.20 ?

- * The PC1 50.0.0.10 sends a ARP request to the

LAN network. The Request Contains

My IP 50.10
My Mac A

- * The ARP request sends to the

D IP 50.20
D Mac FFFF

all devices in a network. If it finds the 50.20 and

their Mac, the PC2 sends ARP reply

M IP 50.20
M Mac B

- * After find the PC2 Mac, PC1 sends echo

D IP 50.10
D Mac A

data by using ICMP. If its send packets are completely received means the system has the proper network connectivity.
