

1, Explain behaviour of hub device

Hub is a Broadcast device is used to connect multiple devices:

Dis.: Traffic because of broadcast
It increase network traffic

2, Explain behaviour of switch device

- * It is a Broadcast device used to connect multiple device
- * Layer 2 device [Contains Mac address] S Mac
D Mac
- * It works on the principle of Broadcast + unicast
[Data link layer] 2

3, Explain behaviour of router device

- * It is used to break the broadcast domain
- * Layer 3 device [Network layer] 3
- * It contains Routing table
- * It is a unicast device

Routing table

1. 172.16.0.0/16

e₁ → gateway

- * Routing table contains list of Routers
